

Strategies to Prevent (STOP) Spillover

Impact Brief

Bangladesh

Enhancing coordinated data sharing and information sharing platforms

- Activity 2.2.2.2: Support stakeholders to prevent zoonotic spillover through establishing an integrated, coordinated and sustainable platform for information sharing, advocacy, and co-designing, co-implementation, and co-monitoring of surveillance activities and interventions at the live bird markets (LBMs)

INTRODUCTION

This activity involves two platforms – one is an integrated data sharing platform for surveillance and early detection activities, and the other is a coordinated information sharing platform between different stakeholders for co-designing, co-implementation and co-monitoring of surveillance and intervention activities. STOP Spillover Bangladesh team has conducted several workshops, group discussions and meetings with national stakeholders to implement the planned two steps towards identifying gaps in the existing platforms to enhance the creation of these integrated, coordinated and sustainable platforms for data and information sharing, advocacy, and co-designing, co-implementation, and co-monitoring of surveillance activities and interventions at the LBMs. Based on the workshop findings, an action plan was developed to implement the activities recommended during the workshop in consultation with consortium members, USAID team and national stakeholders.

Expected Outcomes

- Integrated data sharing platform for surveillance and early detection activities to mitigate spillover risks
- Coordinated information sharing platform for co-designing, co-implementation and co-monitoring of zoonotic diseases surveillance and intervention activities

Group discussion on integrated data sharing platform

Group discussion on coordinated information sharing platform

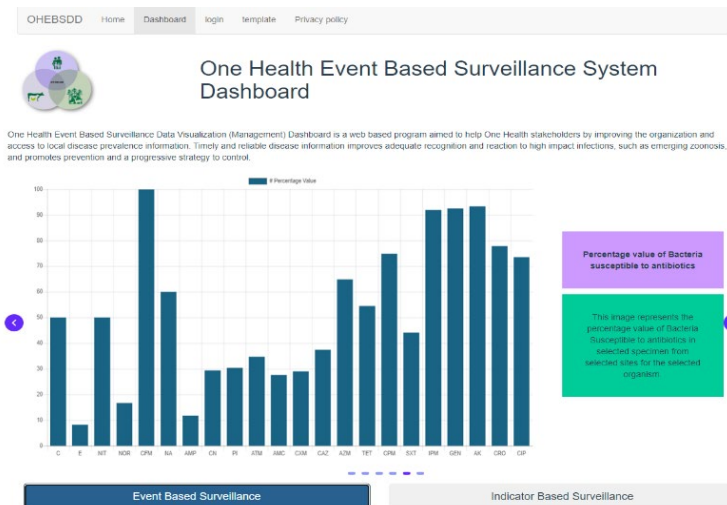

Discussion on coordinated platforms at National One Health Secretariat Coordination Committee meeting

ACTIVITY AT A GLANCE

Activity 2.2.2.2

- Conducted a meeting with the Chair and officials of One Health Secretariat (OHS) regarding the 11th One Health Bangladesh Conference (OHBC) and discussed expected support from and collaboration with STOP Spillover
- The programmer assisted in developing the [official website of 11th One Health Bangladesh Conference 2023](#), which is now up and running, – the conference aims at sharing information on research, intervention and activities on One Health
- The programmer is helping in identifying gaps and resolving anomalies in [One Health Event Based Surveillance System Dashboard](#), which will be further enhanced as coordinated data sharing platform
